

Eridanus: Mid-Point Check

“Eridanus” Team Members

1. Juan Daccarett
2. Gerlin Guillaume
3. Natalia

Submission Contents

Included in Mid-Point Check:

- Eridanus: Mid-Point (PDF)
- Eridanus (Project Folder).
 - Note that
 - **App.js** (Is node server setup)
 - **Views** folder holds the HTML (handlebars) files.
 - **Public** folder holds
 - CSS
 - JS
 - Awards_created
 - Every award created pdf is created in this folder
 - Images/image_uploads
 - Holds every user registered signature image.
 - **db.js** (holds info to connect to database)

■ Routes

- /index.js (holds the logic for the project)

● Videos

- (When I run my app on localhost everything works including displaying and sending the pdf (award created) via email. Unfortunately when I deploy it to heroku I get an error when displaying pdf. (I am assuming its a directory path error). To show that it works I will add video walkthrough on my localhost creating and sending the award created via email.
- <https://www.youtube.com/watch?v=vNozqt2xwOA&feature=youtu.be>

● Link for project (heroku)

- <https://boiling-wave-24261.herokuapp.com/>

● Project Status

- The project so far is about seventy five percent complete. Users can login and register their accounts. Once logged in a user can now create awards. The awards in the backend are created as a latex and then converted to a pdf. The pdf file created and displayed to the user for review. Once the user is happy with the awards they can send the pdf to the employee's email with the push of a button. Another functionality that is complete is that users can now view all the awards they have created. There is still significant functionality left to build, such as the admin and their ability to edit and delete current users. The final functionality to build is to display graphical data of regions and the numbers of awards given.

- User Instructions

- In the home page register or use the following login.
 - Email: test@gmail.com
 - Pass: Testuser91!
- Once logged in you will see two different buttons (created award) and (view awards).
- Created award button
 - A form will display and require the user to input the employee receiving the awards name and their email.
 - Next the award pdf will be displayed to the user and a button (send award) can be interacted with to email the award to the employee.
- View awards button
 - This button will query all the awards created by this user.

- Team Contribution:

- My name is Juan Daccarett and now that we are at the halfway mark I am currently out of ideas to get my two other team members to contribute more. In the past few weeks, one has only managed to create two test for the login page the other has only created three HTML pages which looked nothing to the prototype sketches we decided on. I could not add them and had to redo them myself. I have tried making it as it easiest as possible for them to contribute. I created a Trello account (<https://trello.com/b/s6S6tChB/capstone-project>) to assign tasks. Only one

joined and has still not finished the one task she created. Their average slack response time to my messages is 72 hours. I have made myself available to them for google hangouts if they needed any help but no one has reached out. So far the project is almost done I have the functionality of creating, sending and displaying awards. I have done 98% of the project and the other 2% is the two test cases and the HTML that was never added.
